

# European Summer School on Multiscale Modeling in Chemical Reaction Engineering

## WHAT TO EXPECT

The summer school is intended for PhD students and postdoctoral scientists as well as industrial partners with interest in chemical reaction engineering. The atomistic modeling of reactions on catalytically active surfaces and the design of catalytic reactors spans various time and length scales. This summer school shows ways of bridging these scales through multiscale modeling.

## Topics

Different scales of modeling
Density functional theory and microkinetics
Kinetic Monte Carlo simulations
Computational fluid dynamics and macrokinetics
Reactor design
