

***Dear Graduate Students,***

Digital innovation internships are available at Dow!

Are you interested in industrial research experience? Are you a graduate student in a STEM field with experience in computer science, analytics, machine learning, or other related dimensions of data science? If so, our internship program could be a great opportunity for you!

We will host an in-person introduction to our 2023 Advanced Degree Internship for Scientists & Engineering (ADISE) program on Tuesday evening, November 15, only a couple blocks away from the AIChE conference in Phoenix, Arizona. There, you will meet and interact with Dow experts, leaders, and past interns in R&D to discuss the need for dual-domain STEM and data science skills (e.g., Chemical Engineering + AI modeling) for the future of Dow's digital innovation.

If you are interested in attending the introduction event, please email Margaret McMahan ([MMcMahan@dow.com](mailto:MMcMahan@dow.com)).

While we have limited space for this event's attendees, any current [PhD](#) or [Master's degree student](#) is welcome to apply for an internship.

We look forward to meeting you!
